Index to Volume 9

Subjects

(*L*) denotes Letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Acoustics *47(N)*
Acoustics project competition *227(N), 433(N)*
Amateur Computer Club *71(N)*
Ampère's law *282(L)*
Analogue computers *490(L)*
Anechoic chamber *247*
Antimatter and time reversed consciousness *231, 492(L)*
Apparatus for the determination of g by free fall, A simple *80*
Apparatus testing *490(L)*
Astronomy as education *70(R)*
Astronomy in schools *17(N)*
Astronomy, lasers and light *476(N)*
Astronomy teaching *285(L)*
Audio–visual for physics *468(R)*

Bacon–Descartes–Mpemba phenomenon *490(L)*
Bicycle teaser *59(L)*
Biot–Savart law *493(L)*
Black box principle *50*
Book reviews *64, 113, 286, 366, 429, 494*
Brain teaser *4, 262, 300, 467*

Calculators, Electronic *419, 419(N)*
Calculators, Pocket *414*
Careers poster *294(N)*
Centrifugal force *363(L), 364(L)*
'Centrifugal' force *111(L)*
Centripetal acceleration *366(L)*
Charged particles, Physics and fundamentals of *389*
Chinese furnace *14*
Classical mechanics *62(L)*
College scientists, Problems for *1(N)*
Comprehension and data assessment tests in physics examinations *346*
Computers in A level statistical physics *403*
Computers in schools *72(R)*
Computers in schools, Using analogue *30*
Computers—their impact on colleges *293(R)*
Computing and statistics *323(N)*
Computing in schools *44(N)*
Conferences and courses *68, 116, 292, 368, 432, 496*
Control technology *398(N)*
Conventional current, or electron current? *111(L)*
Conveyor belt problem *491(L)*
Current, Concept of *282(L)*
Curriculum, A new *77*

DC8 as an exemplar of relevant physics *94*
Demonstrations—a dying art? *69(R)*
Descartes—Mpemba phenomenon *284(L)*
Deuterium, Determining the nuclear mass of *485*
Diffraction experiments *361*
Doppler with a sounding tennis ball *63(L)*

Earth resources and their limitations *297*
Editorial *225, 434*
Education, Frontiers in *77(N)*
Educational exhibitions *63(L)*
Electric and magnetic units *13*
Electromagnetic induction at sixth form level, Teaching of *5*
Electromagnetism at university level, The teaching of *9*
Electromagnetism, Teaching *280(L), 294(R)*
Electromagentism, The teaching of *4(N)*
Electron flow *61(L), 364(L)*
Electronic devices, Applications of *305*
Electronics *260(N)*
Electronics course *422*
Electronics in schools *426(N)*
Electronics projects *295(N)*
Electronics, The systems approach to *26(N)*
Electronics using integrated circuits *269*

Electroscope, Electronic gold leaf *393*
Electrostatic field plotting, Quasi-programmed laboratory demonstration *45*
Electrostatics, Modern *381*
Electrostatics, Teaching in schools *371*
Electrostatics, Teaching in universities *375*
Engineering science *295(N)*, *370(N)*
Engineering science and physics texts *250(N)*
Engineering workshop for science teachers *256(N)*
Enquiry 1974 *485(N)*
Equipotential surfaces and electric field lines *263*
Ether, Detection of the *265*
Examination error *110(L)*
Experiments, Notes on *434*

Fabry–Perot experiment, Line balancing in the *27*
Film reviews *495*
Fluids, Time dependent *38*
Fluids, Viscoelastic *313*
Fourier transform spectroscopy *324*
Fourier transformer *331*

Gravitational analogue *113(L)*
Gravity in an aeroplane *284(L)*
Guinness awards *17(N)*

Heat in schools? How do you teach *73*
Heating *490(L)*
Holography *409(N)*
Hover principle *431(N)*

Inclined plane paradox *426*
International Council of Associations for Science Education *71(N)*, *429(L)*
'Involvement in Physics' *62(L)*

Kinetic theory *283(L)*
Kinetic theory, Teaching *107(L)*

Least squares method *321*
Lecture service to schools *2(N)*
Life on earth *285(L)*

Mach's principle *336*
Mariotte *275*
Maskelyne's Schehallien experiment *452*
Mathematics and physics, Modern *22(N)*
Mathematics for physics in the USA *350*
Mathematics, Pre O level *369(N)*
Mathematics–physics interface *496(N)*
Measurement of temperature; Part 1: Temperature scales *75*
Measurement of temperature: Part 2: Practical thermometry *251*
Mechanics of the human body *338*
Minicourses in a first year physics laboratory *23*
More learning—less teaching? *16(R)*
Muonium *34*
Music course, Open University *1(N)*
Musical acoustics, Projects in *479*

Neutron activation analysis *352*
News and comment *1*, *69*, *225*, *293*, *369*, *433*
Noise, Natural *310*
Nuffield physical science, A level *74(N)*

Open University 1973 *226(R)*
Open University films *410(N)*
Open University students 1974 *3(N)*
Oscillator, A low cost frequency modulated *28*

Peltier effect *458*
Photoelastic stress analysis *380(N)*
Photoelasticity without polaroids *411*
Photographic competition *70(N)*
Physics apparatus *52*, *227*, *334*, *435*
Physics based university courses *261*
Physics centre for the South West *369(N)*
Physics, Complacency in *433*
Physics courses in higher education *117*
  Courses in physics in England, Wales and Northern Ireland *125*
  Courses in physics in Scotland *207*
  Courses in physics in medical colleges *217*
  Courses in Eire *216*
Physics education *296(N)*
Physics examinations *369*
Physics examinations, The consistency of marking *271*
Physics in Scottish schools *399(R)*
Physics magazines *64(L)*
Physics, interface with mathematics *496(N)*
Physics newsletter *370(N)*
Physics on stamps: Appendix IV *37*
Physics workshop *227(N)*
Piezoelectric effect, Demonstration of *409*
Practical work in science *228*
Project material *429(L)*
Project work in schools and higher education *246(N)*

Quantum ideas, The teaching of *434*
Quantum mechanics *448*
Quantum physics, Introducing *436*
Quantum theory, Elementary concepts of *444*
Queries in physics *22*, *96*, *244*, *310*, *398*, *451*
Queries in physics dinner *370(N)*

Radiation protection *493(L)*
Radioactive decay chains: an electronic analogue *487*
Radioactivity *49(N)*
Research in schools *70(R)*
Rocket trip, A quasi-practical *464*

School science and technology *3(N)*

Schools Council policy *293*
Science against crime *268(N)*
Science curriculum development *74(N)*
Science education *296(N)*
Science Education, Studies in *2(N)*
Science teaching source book *294(N)*
Scientific theory, Teaching *109(L)*
Semiconductors, The story of *15(N)*
Shear stress in a solid material *104*
SI summary chart *225(N)*
Skill sessions *18*
Soap films *463(N)*
Sound reflection *429(L)*
Specific heat of solids *257*
Spectrograph, The conversion of a monochromator *244*
Spectroscopy *435(N)*
Stars, Pulsating *478(N)*
Statistical mechanics *234, 301*
Statistics for A level *356(N)*
Sun size *112(L)*
Surplus Buying Agency *477*
Swing and lift *87, 364(L)*
Syllabus, Effect of on mathematical knowledge *462*

Teachers, Course for science *295(N)*
Teachers' centre, New Bath *2(N)*
Teachers' pay *433(N)*
Teaching and learning, Workshop course in *2(N)*
Teaching by machine *242*
Teaching physics *335(N)*
Technicians, Training laboratory *370(R)*
Technology for teachers *225(N)*
Telescopes, Teaching *82*
Temperature and the ideal gas *60(L)*
Terrestrial and celestial coordinates *343*
Thermal expansions in solids *254*
Time symmetry *74(N)*
Timekeeping, Modern *443(N)*
Transition probability and the ESR experiment *102*
Trigonometrical ratios and AC theory *308*

Voltage-to-frequency converter *472*

Weight and centrifugal force *357*
Weight and mass *365(L)*

X ray diffraction *53*
X ray topography *97*
X rays, An application of *47*

Yield point *278(L)*

Authors/with titles

(*L*) denotes Letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Aldridge R V: An integrated electronics course for undergraduate physicists *422*
Allenson M B, Piercy A R and Taylor K N R: A low cost frequency modulated oscillator *28*
Ansell M, Cryer N B and Brandt D: Minicourses in a first year physics laboratory *23*
Archenhold W F: Editorial *225*
Archenhold W F: Notes on experiments *434*
Archenhold W F: Physics courses in higher education *117*
Archenhold W F: The teaching of electromagnetic induction at sixth form level *5*

Balchin A A: X ray topography *97*
Balchin A A and Whitehouse C R: The dynamical theory of x ray diffraction *53*
Ball J E: An application of x rays used by English China Clays Group *47*
Barnes F and Potter A: Ray Illingworth *364(L)*
Barnes F and Potter A: Swing and lift *87*
Beeby J L: Physics based university courses *261*
Belsom C G H and Elton L R B: The effect of syllabus on mathematical knowledge *462*
Bishop J E L: Textbook physics *429(L)*
Black P J, Griffith J A R and Powell W B: Skill sessions *18*
Bligh P H: The use of computers in teaching statistical physics at Nuffield A level *403*
Bond M M and Hadley D W: Photoelasticity without polaroids *411*
Bowers J H: Physics more difficult to pass *369*
Bowers J H, Thorpe C W and Jenkins J: Manufacturers' exhibition at the ASE annual meeting *334(R)*
Brandt D, Ansell M and Cryer N B: Minicourses in a first year physics laboratory *23*
Bright A W: Modern electrostatics *381*
Broadhurst F M: Earth resources and their limitations *297*
Burge E J: Physics on stamps: Appendix IV *37*

Caines P J: Centripetal acceleration *366(L)*
Caudwell J and Dutton P E: An Aladdin's cave for physicists *477*
Christie P F, Mathieson E and Williams G P: Fourier transform spectroscopy *324*
Clark P M, Walton A J and Millington A J: Playing at statistical mechanics *234, 301*
Clark T A: The gravitational analogue *113(L)*
Colbeck J: Bicycle teaser *59(L)*
Collyer A A: Time dependent fluids *38*
Collyer A A: Viscoelastic fluids *313*
Conde C A N, Salete M and Leite S C P: An inclined plane paradox *426*
Cooke C: The fitting of straight lines by the method of least squares *321*
Cooper R F: Flow of electrons? *364(L)*
Cooper R F: Teaching astronomy with Mr Spock *285(L)*
Cryer N B, Brandt D and Ansell M: Minicourses in a first year physics laboratory *23*
Cryer P: Teaching by machine *242*
Culpin M F: Teaching kinetic theory *108(L)*
Culpin M F: The concept of shear stress in a solid material *104*
Culpin M F: The conveyor belt problem *491(L)*

Dagnall A: An inexpensive anechoic chamber *247*
Darby M I and Morton N: Extending the scope of diffraction experiments *361*
Davies B: Edme Mariotte *275*
Davies G R: An electronic gold leaf electroscope *393*
Deeson E: Audio–visual for physics *468*
Deeson E: Computers—their impact on colleges *293(R)*
Deeson E: ICASE *429(L)*
Deeson E: Open University 1973 *226(R)*
Deeson E: Open University music course *1(N)*
Deeson E: Open University students 1974 *3(N)*
Deeson E: Technology for teachers *225(N)*
Deeson E: The electronic calculator *419*
Deeson E: Weight and mass *365(L)*
Dougal R C: A simple apparatus to demonstrate the Peltier effect *458*
Dutton P E and Caudwell J: An Aladdin's cave for physicists *477*
Dyson J E: Applications of electronic devices in the sixth form laboratory *305*

Eaton T W and Fuller L S D: A simple demonstration of the piezoelectric effect *409*
Eaton T W and Smith R: A simple method for the determination of the nuclear mass of deuterium *485*
Ebison M G: Sixth form electronics projects *295(N)*
Edmonds J D Jr: A quasi-practical interstellar rocket trip *464*
Edmonds J D Jr: Antimatter and time reversed consciousness *231, 492(L)*
Elton L R B: Classical mechanics *62(L)*
Elton L R B and Belsom C G H: The effect of syllabus on mathematical knowledge *462*
Evans G R: Radioactive decay chains: an electronic analogue *487*

Field R: Centrifugal force *364(L)*
Firth I: Doppler with a sounding tennis ball *63(L)*
Firth I: Projects in musical acoustics *479*
Forrest A M: The measurement of temperature; Part 1: Temperature scales *75*
Forrest A M: The measurement of temperature; Part 2: Practical thermometry *251*
Francis D: An introduction to electronics using integrated circuits *269*
Frank F C: The Descartes–Mpemba phenomenon *284(L)*
Fuller L S D and Eaton T W: A simple demonstration of the piezoelectric effect *409*

Gallear R: The Bacon–Descartes–Mpemba phenomenon *490(L)*
Gardiner D and Walker G: Yield point *278(L)*
George S: Basic mathematics background of students in the one year non-calculus physics course in the USA *350*
George S: The conversion of a monochromator into a spectrograph *244*
Gifford D: Radiation protection *493(L)*
Gillespie E S: Muonium *34*
Gonzalez C: Physics magazines wanted *64(L)*
Gregory J M: Teaching electrostatics in schools *371*
Griffith J A R, Powell W B and Black P J: Skill sessions *18*

Hadley D W and Bond M M: Photoelasticity without polaroids *411*
Hall T B and Matthews B C: 'Involvement in Physics' *62(L)*
Harland D B: Comprehension and data assessment tests in physics examinations *346*
Hately M C: A circle approach to the simple trigonometrical ratios and AC theory *308*
Heath N E: Heating *490(L)*
Helsdon R M: Are we living on the moon? *285(L)*
Helsdon R M: On some past articles *365(L)*
Higbie J: Chinese furnace *14*
Higbie J: Local gravity in an aeroplane *284(L)*
Higbie J: Sun size *112(L)*
Higbie J: The concept of current *282(L)*
Hinson D J: Using analogue computers in schools *30, 490(L)*
Hooper D: Problems for college scientists *1(N)*
Houldin J E: The teaching of electromagnetism at university level *9*
Houldin J E: Validity of Ampère's law *282(L)*
Hughes J F: Teaching electrostatics in university courses *375*

Jackson A T: Detection of the ether *265*
James C: The consistency of marking a physics examination *271*
Jardine J T, McIntyre J K and Standley K J: The future of physics in Scottish schools *399(R)*
Jarvis W H: Field testing on new apparatus *490(L)*
Jenkins J, Bowers J H and Thorpe C W: Manufacturers' exhibition at the ASE annual meeting *334(R)*
Jones H W and Morgan B: An experiment on specific heat of solids *257*
Jones T: The teaching of electromagnetism *280(L)*

Keohane K W: Project material wanted *429(L)*
Keyes O B: 'Electron flow' *61(L)*

Lawrence J L and Pearson R C: Thermal expansions in solids *254*
Leadstone G S: Maskelyne's Schehallien experiment of 1774 *452*
Lee R M: Schools Council policy *293*
Leite S C P, Conde C A N and Salete M: An inclined plane paradox *426*
Lewis J L: Are we too complacent? *433*
Lockett T K: The DC8 as an exemplar of relevant physics *94*

Mace W K: Bicycle teaser *59(L)*
Maclean A J: Conventional current, or electron current? *111(L)*
Makin B: Physics and fundamentals of charged particles *389*
Martin J L: Quantum mechanics from the cradle? *448*
Mathews B C and Hall T B: 'Involvement in Physics' *62(L)*
Mathieson E, Williams G P and Christie P F: Fourier transform spectroscopy *324*
McBrierty V J: Transition probability and the ESR experiment *102*
McCaig M: Validity of Ampère's law *282(L)*
McClelland G: Centrifugal force *363(L)*
McIntyre J K, Standley K J and Jardine J T: The future of physics in Scottish schools *399(R)*
McNally D: Astronomy as education *70(R)*
Millington A J, Clark P M and Walton A J: Playing at statistical mechanics *234, 301*
Morgan B and Jones H W: An experiment on specific heat of solids *257*
Morris F: A simple voltage-to-frequency converter *472*
Morton N and Darby M I: Extending the scope of diffraction experiments *361*

Ofran M: 'Centrifugal' force *111(L)*
Ogborn J: Introducing quantum physics *436*
Osborne J M: The pocket calculator in school physics *414*

Pearson R C and Lawrence J L: Thermal expansions in solids *254*
Pedersen C I: Physics magazines wanted *64(L)*

Petersen T: Teaching kinetic theory *283(L)*
Petersen T: Temperature and the ideal gas *60(L)*
Philpot T A: Mechanics of the human body during a tucked somersault *338*
Piercy A R, Taylor K N R and Allenson M B: A low cost frequency modulated oscillator *28*
Potter A and Barnes F: Ray Illingworth *364(L)*
Potter A and Barnes F: Swing and lift *87*
Powell W B, Black P J and Griffith J A R: Skill sessions *18*
Powles J G: Examination error *110(L)*

Reid J S: Teaching telescopes *82*
Richards D A: Equipotential surfaces and electric field lines *263*
Richards D A: The transformation from terrestrial to celestial coordinates *343*
Rogers G L: Line balancing in the Fabry–Perot experiment *27*
Rogers G L and Stephenson N W F: The Fourier transformer *331*
Rose-Innes A C: 'Electron flow' *61(L)*
Rosser W G V: The Biot–Savart law *493(L)*

Salete M, Leite S C P and Conde C A N: An inclined plane paradox *426*
Sayer M: 'Electron flow' *61(L)*
Shaw R: How do you teach heat in schools? *73*
Smith L V: Teaching kinetic theory *109(L)*
Smith R and Eaton T W: A simple method for the determination of the nuclear mass of deuterium *485*
Smyth A J M: Where angels fear to tread *352*
Sparkes R A: The teaching of scientific theory *109(L)*
Spurgin C B: Teaching kinetic theory *107(L)*
Squire P T: Quasi-programmed laboratory demonstration: Electrostatic field plotting *45*
Standley K J, Jardine J T and McIntyre J K: The future of physics in Scottish schools *399(R)*
Stephens N W F and Rogers G L: The Fourier transformer *331*
Swetman T P: Mach's principle *336*

Tang T B: Antimatter and time *492(L)*
Tawney D A: Educational exhibitions *63(L)*
Taylor K: Weight and centrifugal force *357*
Taylor K N R, Allenson M B and Piercy A R: A low cost frequency modulated oscillator *28*
Temple J: A new curriculum *77*
Thorpe C W, Jenkins J and Bowers J H: Manufacturers' exhibition at the ASE annual meeting *334(R)*
Trinogga L A: Understanding natural noise *310*
Turner P: A resource based learning system for practical work in science *228*

Walker G and Gardiner D: Yield point *278(L)*
Walne M: Weight and mass *365(L)*
Walton A J, Millington A J and Clark P M: Playing at statistical mechanics *234, 301*
Walton D S: A simple apparatus for the determination of g by free fall *80*
Warren J W: Elementary concepts of quantum theory *444*
Wheatley G A: The teaching of electromagnetism *281(L)*
Whitehouse C R and Balchin A A: The dynamical theory of x ray diffraction *53*
Whitworth R W: More learning—less teaching? *16(R)*
Williams G P, Christie P F and Mathieson E: Fourier transform spectroscopy *324*
Woolnough B E: Are your computers really necessary? *72(R)*
Woolnough B E: Demonstrations—a dying art? *69(R)*
Woolnough B E: Too much, too soon, too abstract? *294(R)*
Wray E M: The black box principle *50*

Book reviews

Acosta V *et al: Essentials of Modern Physics* 286
